## IN THE ABSTRACT:

Please amend the abstract of disclosure as follows:

The present invention relates to an alert system with a sensor to detect metal or magnetic material article made of metal or magnetic. When detecting any dangerous metal or magnetic material article made of metal or magnetic nearby, the sensor sends out a signal to the control panel, prompting the warning system to send out a signal or sounds to warn the user, so as to protect the user from being hurt by dangerous metal or magnetic material article made of metal or magnetic.
